Profitable use of generative artificial intelligence (AI).

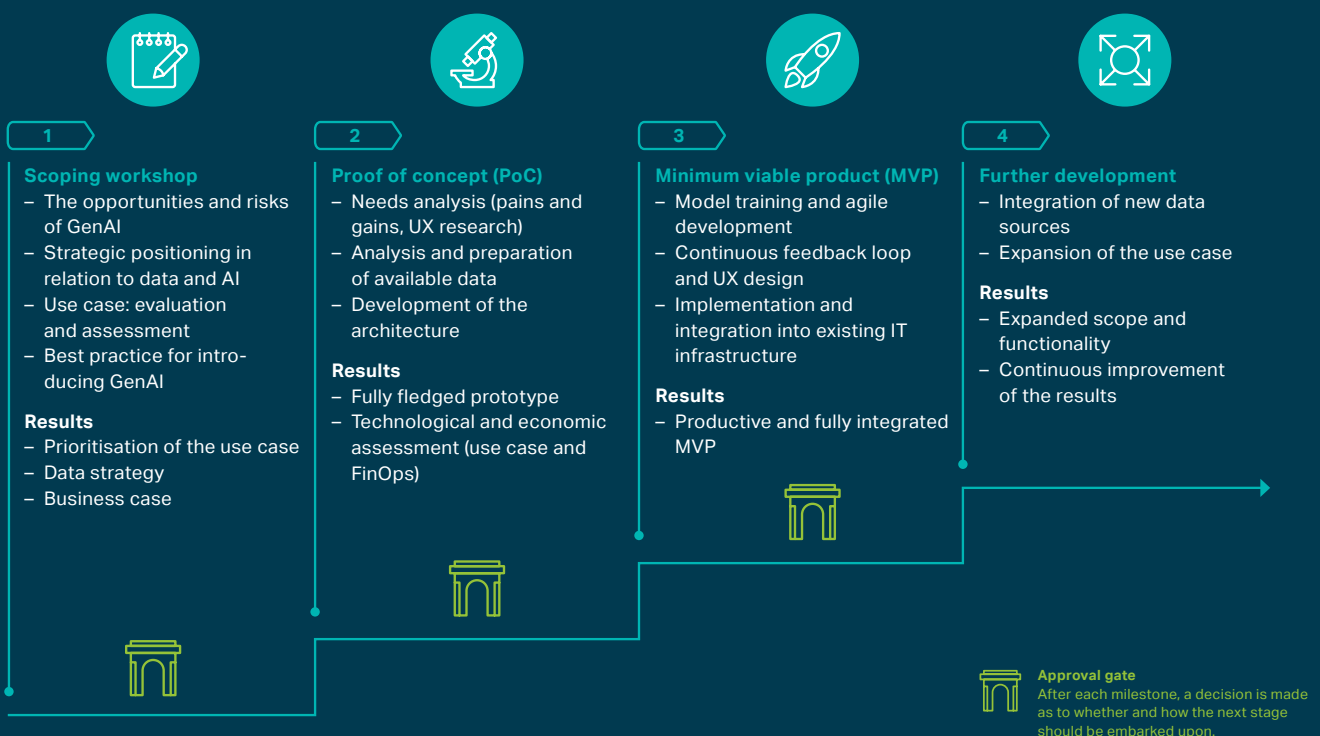

The situation surrounding generative AI (GenAI) such as ChatGPT and other LLMs (large language models) is highly dynamic and is putting decision-makers in companies under intense pressure and confronting them with various challenges:

- What **potential** does GenAI offer for our company and how can this potential be realised?
- Which processes or **use cases** are suitable for using GenAI and how should these be designed?
- Does my business case with LLMs **make economic sense** and can I save money with an on-premise approach?
- Do we have the necessary quantity of the **required data** for the training and implementation of GenAI models?
- How can we guarantee **data protection and security aspects** at all times while respecting **ethical principles** in the process?

Not only do we have the answers to these questions, **but we can provide you with the solutions.** Regardless of whether it is optimising complex processes, simplifying knowledge management or automating repetitive processes, we create an individual enterprise GenAI solution for your business needs in a secure environment (on-premise or cloud). In doing so, you can also realise the initial benefits to your business **with a small budget.**

Our iterative process will ensure that your GenAI plans have real substance. From the scoping workshop and the proof of concept (PoC) to the minimum viable product (MVP) and continuous further development, creating added value for your business is always at the heart of what we do. In order to ensure that we are always on the right path, we use approval gates, which enable us to make a go/no-go decision for the next phase.

Step by step to your GenAI solution

In the **scoping workshop**, we develop an initial strategy approach for dealing with data and AI. Together with our experts, you evaluate and expand on possible use cases and, if needed, flesh out an existing specific idea. In doing so, we also take into account best practices, for example in the areas of data governance, data protection and compliance.

We develop a PoC for a specific use case that demonstrates the feasibility and benefits of the solution. Analysis and development of the database is key here, as without a clean database, the PoC will not deliver any satisfactory results. The analyses deliver both a technological and economic evaluation and a detailed architectural suggestion.

For your **MVP**, we draw on our experience from current GenAI implementation projects for which we always use the latest and most advanced technologies. Our agile process ensures that we achieve the goals set. After integration into your IT infrastructure, you will have a **productive GenAI use case** which can be further developed on an ongoing basis.

Benefit from these advantages with us

High speed: Just a few weeks are needed from the strategy to the specific MVP for your GenAI project.

Needs and goal orientation: We take a holistic approach in which we combine data science, consulting and UX resources in order to best understand your company and your challenges, therefore enabling us to develop effective and efficient GenAI solutions.

Innovative spirit: With our holistic approach, we not only develop the initial productive use case, we also provide you with the foundation for additional innovative projects as part of your AI strategy.

Measurability: Based on your needs and goals, our experts develop numerical KPIs together with you which you can use to measure business benefits. These KPIs form the basis for the draft solution and indicate the progress to you at all times.

Ergon – your expert partner for AI

In our opinion, AI is not just hype, it is a technology that supports productive and sustainable solutions with a clear business benefit. We focus on specifically implementing solutions far beyond proofs of concept – and **with guaranteed success**.

Last but not least, our interdisciplinary holistic approach enables us to provide you with qualified experts from numerous industries for your project.

Find out how you can benefit from our GenAI expertise – arrange a consultation now.
